ABSTRACT

This 7th edition of the World Directory of Medical Schools is a country-by-country listing of 1,642 institutions of basic medical education approved by the competent national authorities in 157 countries or areas; the information reflects academic year 1995-96. The directory also provides information on the conditions for obtaining the license to practice medicine in 14 countries that do not have medical schools. Entries are alphabetical by country and by individual medical schools. Country data includes total population, number of physicians per 100,000 population, number of medical schools, duration of basic medical degree course, degree awarded, and information about medical registration/license to practice. School entries include the year instruction started; the language of instruction; duration of the basic medical degree course, including practical training; entrance examination requirements; and whether foreign students are eligible for admission. This edition also includes information on national regulations governing medical registration and the license to practice and on the existence of bilateral or multilateral agreements relating to the mutual recognition of physicians' qualifications or experience. A database similar to the printed directory is being constructed based on two questionnaires.

SEVENTH EDITION

WORLD HEALTH ORGANIZATION
GENEVA

The World Health Organization was established in 1948 as a specialized agency of the United Nations serving as the directing and coordinating authority for international health matters and public health. One of WHO's constitutional functions is to provide objective and reliable information and advice in the field of human health, a responsibility that it fulfils in part through its extensive programme of publications.

The Organization seeks through its publications to support national health strategies and address the most pressing public health concerns of populations around the world. To respond to the needs of Member States at all levels of development, WHO publishes practical manuals, handbooks and training material for specific categories of health workers; internationally applicable guidelines and standards; reviews and analyses of health policies, programmes and research; and state-of-the-art consensus reports that offer technical advice and recommendations for decision-makers. These books are closely tied to the Organization's priority activities, encompassing disease prevention and control, the development of equitable health systems based on primary health care, and health promotion for individuals and communities. Progress towards better health for all also demands the global dissemination and exchange of information that draws on the knowledge and experience of all WHO's Member countries and the collaboration of world leaders in public health and the biomedical sciences.

To ensure the widest possible availability of authoritative information and guidance on health matters, WHO secures the broad international distribution of its publications and encourages their translation and adaptation. By helping to promote and protect health and prevent and control disease throughout the world, WHO's books contribute to achieving the Organization's principal objective - the attainment by all people of the highest possible level of health.

World directory of medical schools

Important note

The World Health Organization has no authority to grant any form of recognition or accreditation to schools for the training of health personnel. Such a procedure remains the exclusive prerogative of the national government concerned. Consequently, no institution listed in this Directory is recognized or accredited by, or its training programme endorsed by, the World Health Organization. The lists of names and addresses were compiled from data received from, or confirmed by, Member States. The Organization cannot therefore accept responsibility for the inclusion or the omission of the names of any institutions.

Preface

The seventh edition of the *World directory of medical schools* is the result of a wide and coordinated effort encompassing the design, field-testing and translation of questionnaires, the development of an electronic database, and editing, printing and dissemination. The resulting directory provides information on 1642 schools worldwide and is a continuation of the work carried out in previous editions.

The electronic database on which the directory is based provides additional information relevant to medical curricula, educational approaches, the assessment of students, the availability and use of facilities and equipment, staff activities, continuing education, the mutual recognition of qualifications, and the evaluation or accreditation of medical school programmes. For those concerned with and committed to improving the quality of medical education and its relevance to the health needs of society, this database will provide information on the status and trends of medical education worldwide.

While medical education must be adapted to respond to the specific needs of individuals and the populations they intend to serve in a given environment, certain capacities of a physician are universal. In a world where borders are becoming increasingly illusory, there are growing opportunities and expectations for international collaboration to enhance quality assurance in medical education through research and development.^{1,2} Interest in the contribution of medical schools to respond to people's health needs and to participate in shaping the future health system through their education, research and service-delivery missions is also growing worldwide.³⁻⁶ Benchmarks and

evaluation mechanisms are required to assess and promote the role of medical schools in educating future generations of doctors and in influencing the features of their future practice environment for an optimal response to the health needs of society. In particular, action is needed at the institutional, national and global level to design and promote the most appropriate approaches to allow medical schools to be the principal contributors to people's health.

Introduction

The seventh edition of the *World directory of medical schools* lists institutions of basic medical education in 157 countries or areas. It also provides information on the conditions for obtaining the licence to practise medicine in 14 countries or areas that do not have medical schools. The information presented in general reflects the situation during the academic year 1995–96, and is based primarily on answers to two questionnaires designed by the World Health Organization and sent: (i) to ministerial authorities requesting information of a general nature on medical education and conditions for practice in the country; and (ii) to all medical schools of whose existence the World Health Organization has been informed by the national government, either by confirming existing lists or by providing specific information. The questionnaires were field-tested in several parts of the world, but it sometimes proved difficult to accommodate data provided from ministerial authorities or medical schools within the suggested layout.

At the time of going to press, and in spite of follow-up, a number of governments and medical schools had not replied to the questionnaires. In these cases only those schools that were previously recognized by the government concerned have been listed. It is therefore not possible to guarantee in all cases the complete accuracy of the information presented, particularly in regard to up-to-date addresses. In addition, compatible information was not always provided by the authorities of the countries cited, particularly concerning agreements between countries. Schools that have been established but where instruction has not yet started have not been listed.

The World Health Organization would appreciate notification of any errors and omissions. These should be addressed to the Department of Organization of Health Services Delivery, World Health Organization, 1211 Geneva 27, Switzerland.

The population figures were made available to WHO by the United Nations Population Division following their 1996 revision of *World population prospects*. The number of physicians per 100 000 population (1993) was taken from *The world health report 1997* (WHO, Geneva, 1997). The medical schools in each country are listed alphabetically by city, except in the case of Brazil, Canada, China, Colombia, India, Mexico and the USA, where they are listed under the state or province; Japan, where they are listed by prefecture; and the United Kingdom, which is subdivided into England, Northern

Ireland, Scotland and Wales. The data were either submitted by the governments or obtained directly from the institutions. Where no information was available, this is indicated by a dash (—). As the information included in the Directory must of necessity be restricted in scope, the name and address, where available, of the national registration body or licensing authority from which further information can be obtained has been given for each country or area.

Scope of the directory

The following information is provided for most of the medical schools listed: the name and address, the year instruction started, the language of instruction, the length of the degree course, and whether the applicant is required to pass an entrance examination and foreign students are eligible for admission.

Name and address

The names and addresses of the medical schools are in the language of the country concerned, unless the language does not use the Roman alphabet. In that case an English or French version is given, depending on which of the two languages was used to answer the questionnaires. Capital letters have been used for all names and addresses; diacritical marks and accented characters have been omitted as these posed problems for the computerized database.

Year instruction started

This is the year in which medical education began at the institution; it does not necessarily correspond to the date when the institution was founded.

Language

This refers to the language(s) used in teaching. Where more than one language is used, they are listed in decreasing order of importance.

Duration of basic medical degree course, including practical training

The degree course is often followed by an internship of 1 or 2 years.

Database

A database is being constructed, based on the replies to the two questionnaires. It covers the following areas:

Ministerial questionnaire

- Current number of medical schools within the country.
- Duration of the programme of medical education.
- Title of degree awarded.
- Medical registration/licence to practise.
- Mutual recognition of qualifications.
- Accreditation/recognition or equivalent system.

Medical school questionnaire

- General information.
- Curriculum.
- Assessment of students.
- Facilities/equipment.
- Staff activities.
- Continuing education.
- Interaction with other entities.
- Evaluation and accreditation.

Copies of the two questionnaires are available on request from the Department of Organization of Health Services Delivery, World Health Organization, 1211 Geneva 27, Switzerland.

Acknowledgements

The World Health Organization gratefully acknowledges the contribution of the Educational Commission for Foreign Medical Graduates (ECFMG) and in particular its late former President, Dr M. Wilson, ECFMG, Washington, DC, USA, and Professor A. Rothman, University of Toronto, Toronto, Canada, who assisted in designing the questionnaires on which the directory is based. The contribution of the deans and faculties from the medical schools that participated in the field-testing of the questionnaires is also gratefully acknowledged.

AUSTRALIA

Total population in 1995: 18 957 000

Number of physicians per 100 000 population (1993): —

Number of medical schools: 10

Duration of basic medical degree course, including practical training: 4–6 years (a further year of clinical practice in a teaching hospital is required before the degree is awarded)

Title of degree awarded: Bachelor of Medicine and Bachelor of Surgery (MB, BS)

Medical registration/licence to practise: Registration is obligatory with the medical registration authority in any of the eight States and Territories comprising the Federation of Australia. The licence to practise medicine is granted to holders of an MB/BS degree from a medical school accredited by the Australian Medical Council (AMC) following a satisfactory 1-year internship in an approved teaching hospital. A certificate of good standing is required. Graduates who have qualified abroad are required to pass a two-part AMC examination.

Work in government service after graduation: Not obligatory

Agreements with other countries: Graduates of New Zealand medical schools accredited by the AMC are entitled to unconditional registration.

AUSTRIA

Total population in 1995: 8 106 000

Number of physicians per 100 000 population (1993): 327

Number of medical schools: 3

Duration of basic medical degree course, including practical training: 6–8 years
(including 16 weeks' compulsory internship)

Title of degree awarded: *Medicinae Universalis Doctor (Dr med.univ., Doctor of Medicine)*

Medical registration/licence to practise: Registration is obligatory with the *Oesterreichische Aerztekammer* (Austrian General Medical Council), *Weihburggasse 10–12, 1010 Wien*. The licence to practise medicine is granted to medical graduates with Austrian or European Union citizenship who have postgraduate training as a general practitioner or as a specialist. Graduates of foreign medical schools must also have their degree validated.

Work in government service after graduation: Not obligatory

Agreements with other countries: An agreement exists with other countries of the European Union (Directive 93/16/EEC governing the employment of doctors; the Italian *Laurea in Medicina* has automatic equal status with *Dr med.univ.*).

CHINA

Total population in 1995: 1 232 083 000

Number of physicians per 100 000 population (1993): 115

Number of medical schools: 150

Duration of basic medical degree course, including practical training: 3–8 years

Title of degree awarded: **Bachelor of Medicine**

Medical registration/licence to practise: **Registration is obligatory with the health department of the local government. Graduates must undertake a 1-year internship and have working experience before receiving their final degree. Those who have graduated abroad must have their degree approved by the national education department. Foreigners may practise for short periods only with special authorization and must be registered with a medical institution in China.**

Information on the granting of a licence to practise medicine in Hong Kong Special Administrative Region (Hong Kong SAR) is available from the Medical Council of Hong Kong, Hong Kong Academy of Medicine Building, 99 Wong Chuk Hang Road, Aberdeen, Hong Kong SAR. All medical graduates wishing to register as a medical practitioner with the Medical Council of Hong Kong (with the exception of graduates of the University of Hong Kong and the Chinese University of Hong Kong, and Hong Kong Permanent Residents holding recognized United Kingdom, Irish and Commonwealth diplomas, subject to certain conditions), are required to pass the Council's Licensing Examination and successfully complete a period of pre-registration internship training in approved hospitals or institutions.

Work in government service after graduation: —

Agreements with other countries: —

UNITED STATES OF AMERICA

Total population in 1995: 269 444 000

Number of physicians per 100 000 population (1993): 245

Number of medical schools: 141 (includes schools of osteopathic medicine)

Duration of basic medical degree course, including practical training: 4–8 years

Title of degree awarded: Doctor of Medicine (MD) or Doctor of Osteopathy (DO)

Medical registration/licence to practise: The licence to practise medicine is granted by the individual states. Completion of an acceptable programme of medical education followed by 1–3 years of accredited residency training and an examination acceptable to the licensing board is required. Some states have separate licensing boards for osteopathic medicine. Information concerning special requirements for osteopaths can be obtained from the Federation of State Medical Boards, 400 Fuller Wiser Road, Suite 300, Euless, TX 76039-3855.

Graduates of foreign medical schools must be certified by the Educational Commission for Foreign Medical Graduates (ECFMGSM), 3624 Market Street, Philadelphia, PA 19104-2685, to be eligible to enter accredited programmes of graduate medical education (GME). ECFMG certification is also a prerequisite for licensure to practise medicine in most states and is one of the eligibility requirements to taking Step 3 of the United States Medical Licensing ExaminationTM (USMLETM). Students and graduates of foreign medical schools should refer to the current edition of the ECFMG information booklet for detailed information on eligibility and requirements for ECFMG certification. Graduates of foreign medical schools who are not

citizens or permanent residents of the USA must have been legally admitted to the country before beginning graduate medical education.

Work in government service after graduation: **Not obligatory**

Agreements with other countries: **The North American Free Trade Agreement has provisions concerning the recognition of professional degrees in Canada, Mexico and the USA.**

*Prices in developing countries are 70% of those listed here.

The seventh edition of the *World directory of medical schools* lists institutions of basic medical education that have been approved by the competent national authorities in 157 countries or areas, and provides some information about each that will be useful to health officials, medical faculties, students and student counsellors.

In this edition, a systematic attempt has been made to include information on national regulations governing medical registration and the licence to practise medicine and on the existence of bilateral or multilateral agreements relating to the mutual recognition of physicians' qualifications or experience. Also included is updated information on the establishment of new medical schools, as well as notifications of changes in the name, university affiliation or address of existing schools. The *Directory* also provides brief information on each school, including the year in which instruction started, the language of instruction, the length of the degree course, whether the applicant is required to pass an entrance examination and whether foreign students are eligible for admission.
